

The Dance in Flow

Hosted by: Lewis Beal

Project Information (EN)

Exploration & Curiosity

The Dance in Flow explores the fascinating relationship between physical phenomena and human perception. Through the interplay of moving water and light, the work reveals a series of mesmerising visuals that appear to challenge the logic of what we see.

Emerging from a curiosity for phenomena that captivate and resist immediate understanding, the installation invites viewers into a space where perception becomes uncertain, and familiar elements behave in unexpected ways.
