

Tomorrow Living

An exploration of our future habitat

Een onderzoek naar de toekomst van wonen en werken

Hosted by: FRAME

Project Information (EN)

Four episodes on the future of living

Comprised of four chapters - Restorative, Responsive, Resilient and Responsible - the Tomorrow Living series investigates how we can truly optimize our life at home using technology, making it adaptable to the inevitable environmental, social and political changes global society faces this century. To get a truly holistic perspective on the future of domestic space, Thiemann and Huawei's Milan Aesthetic Research Centre enlisted the expertise of some of the world's most influential designers, architects, artists and scientists. The Tomorrow Living interviews reveal the myriad ways that spaces for living can be conceived to be more restorative, responsive, resilient and responsible, effectively becoming more sustainable for people and the planet in our emerging mixed reality. They critically examine the role that intelligent technology can play as an enabler for this, a tool to help us reconnect with nature, empower communities and contribute to domestic environments.

Projectinformatie (NL)

Vier afleveringen over wonen en werken in de toekomst

De serie Tomorrow Living, die bestaat uit vier hoofdstukken - Restorative, Responsive, Resilient en Responsible - onderzoekt hoe we ons leven thuis echt kunnen optimaliseren met behulp van technologie, zodat het kan worden aangepast aan de onvermijdelijke ecologische, sociale en politieke veranderingen waarmee de maatschappij deze eeuw wordt geconfronteerd. Om een echt holistisch perspectief te krijgen op de toekomst van de huiselijke ruimte, hebben Thiemann en Huawei's Milan Aesthetic Research Center de expertise ingeroepen van enkele van 's werelds meest invloedrijke ontwerpers, architecten, kunstenaars en wetenschappers. De Tomorrow Living-interviews onthullen de talloze manieren waarop leefruimten kunnen worden ontworpen om meer herstellend, responsief, veerkrachtiger en verantwoordelijker te zijn, en effectief duurzamer te worden voor mensen en de planeet in onze opkomende gemengde realiteit. Ze onderzoeken kritisch de rol die intelligente technologie kan spelen om dit mogelijk te maken, een hulpmiddel om ons te helpen opnieuw contact te maken met de natuur, gemeenschappen sterker te maken en bij te dragen aan de huiselijke omgeving.
