Project Information (EN)

Sketchy artefacts

Through a single piece of artefact (Jacoba jug) that was excavated locally in Eindhoven, Jie Chen starts her journey of deciphering a historical object, that is far away from her own cultural background, but close to the city she has been bounded with for the last 10 years. Her enthusiasm for ceramic, drinks and curiosity-driven research helped her open a new gate to understanding the development of the city, culture, and residents.
