

Weaving activism into the fabric of everyday life

Hosted by: Technical University of Technology

Project Information (EN)

Practical and hands-on

Weaving activism into the fabric of everyday life is a short paper-based sketching workshop concerned with ways of bringing activism into everyday life. This is a very practical, hands on workshop that proposes to use co-design and activism strategies grounded in everyday life contextualised in a broader structural level from a citizen's perspective. The workshop makes use of sketchnoting - a form of visual note taking that combines texts with simple drawings to take participants from complaint / concern to action through a process of sketching a personal identity (I am), a concern (I see) and an intervention (I propose). Participants will be engaged in an easy and entry level activity (map your thoughts into paper) that will be specific and situated to their particular concern. They will walk away from the workshop with an action plan in the form of a few sketches, that map their concern, their existing understanding of the problem area as well as their gaps in knowledge, and a practical and actionable set of next steps together with strategies to continue this outside the workshop.

Projectinformatie (NL)

Praktisch en hands-on

De workshop maakt gebruik van sketchnoting - een vorm van visuele notities die teksten combineert met eenvoudige tekeningen om deelnemers van klacht/zorg naar actie te brengen door middel van een proces van het schetsen van een persoonlijke identiteit (ik ben), een zorg (ik zie) en een interventie (Ik stel voor). Deelnemers zullen worden betrokken bij een gemakkelijke activiteit op instapniveau (uw gedachten op papier zetten) die specifiek zijn en aansluiten bij hun specifieke zorg.
