Project Information (EN)

STOUFF, a new take on the Lebanese stove

Baboor, Stoof, Sooby, Wjek, etc. All these names refer to the Lebanese stove, a central element in the traditional Lebanese house layout that brought families together in the main living space around a cooked meal, tea, or a casual cards game. It is at the heart of social gatherings. This elegant object is an answer to many aspects that disappeared from our daily life; The product's efficiency, the smoke flow, the material (5mm steel) and the design made this stove eco-friendly. Forged from 5 mm steel sheets, Stouff will retain heat for prolonged periods of time (higher inertia), ensuring comfort during cold winters. Plus, it is a handmade object executed by Lebanese artisans (smith, carpenter, painter).
