CO2 Harmony

Hosted by: Caldrián Hergo

Project Information (EN)

Caldrián's work is an expression of his deep connection to nature and his respect for the beauty of the world around him. Through his creations, he seeks to capture the essence of interdependence between all living beings and explore the relationship with the natural environment. His artistic approach focuses on the mineral electrodeposition sculpture technique, where the collaboration between chemistry and his creativity results in unique and captivating works. Each sculpture is the result of a dialogue between metallic elements seawater and the electric force that transforms them into surprising and evocative forms. Each sculpture is an invitation to explore the world from a new perspective, appreciate the beauty in the smallest details and recognize the magic that arises when art meets science and nature. Ultimately, his art seeks to transcend the limits of the known and open a window into the wonder and mystery of nature, remembering the importance of our connection with the environment for present and future well-being. Ultimately, his art is a call to action and an invitation to appreciate the beauty in the smallest details of life. It seeks to inspire others to care for and protect the environment, adopting a conscious and responsible vision of the shared world. Through his art, he aspires to be an agent of positive change and contribute to the well-being of the planet.
