

Japanese Knotweed Project

Transforming an invasive plant into biomaterials.

Een invasieve plant transformeren in biomaterialen.

Hosted by: Royal College of Art

Project Information (EN)

Japanese Knotweed (*Reynoutria japonica*) is a non-native plant in the UK classed as an invasive species due to its ability to spread easily creating a hostile environment. It is considered a controlled waste, so after its removal, it must be taken to a lic

Projectinformatie (NL)

Reynoutria japonica is een niet-inheemse plant in het VK die wordt geclassificeerd als een invasieve soort vanwege zijn vermogen om zich gemakkelijk te verspreiden en een vijandige omgeving te creëren. De plant is wijd verspreid in het VK en kost de econo
